# PFH62 High Pressure In-Line Filter Assemblies

Hy-Pro's PFH62 pressure filters are designed to protect sensitive components in hydraulic circuits. Install the series upstream of specific components or directly after the pressure pump to minimize risk of failure and costly system downtime.

Ideal for use as a power unit pump discharge filter and to protect components that are sensitive to particulate contamination and require clean pressurized fluid for reliable operation, such as servo valves.

#### Max Operating Pressure: 6,600 psi (455 bar)

### **Dynamic Filter Efficiency**

Hydraulic applications see dynamic flow changes on a regular basis. Dynamic Filter Efficiency testing takes the ISO16889 Multi-Pass testing even further with variable flow shifts to ensure your filter elements stand up to real world conditions and maintain the highest capture and retention rates in the industry.

#### Unique applications.

With available nickel plating, the PFH62 is an ideal choice for rough duty, high water contamination applications. Media options include wire mesh, water removal, and Dualglass to address even the most unique contamination. A reverse flow check valve option enables usage in reversing hydrostatic drive systems.

#### Industrial duty.

Standard mounting holes for an optional mounting bracket, a variety of indicator options, head-up or inverted mounting options, and side-in / end-out "L-Head" port orientation or a sub-plate manifold mount option make the PFH62 the ideal choice for heavy duty hydraulic filtration.

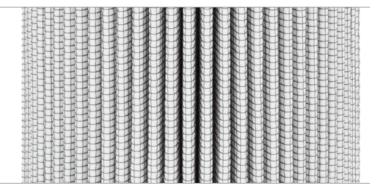

#### Minimize the mess.

The top loading housing on PFH62 filter assemblies provide easy and clean access when servicing or changing the element. Accessing the element is as simple as removing the housing cover, meaning you have no heavy bowl to lift and can get back in operation quicker than ever.

### Extend the life of your element.

Unique internal flow paths provide low resistance to flow, resulting in a low housing pressure drop. Hy-Pro's advanced filter media delivers lower operating ISO Codes to eliminate internally generated contamination meaning your filter will have an incredibly long service life to protect your sensitive components better than ever.

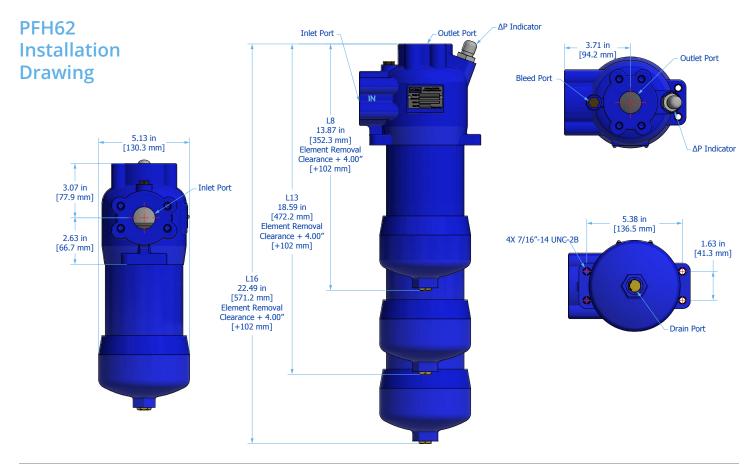

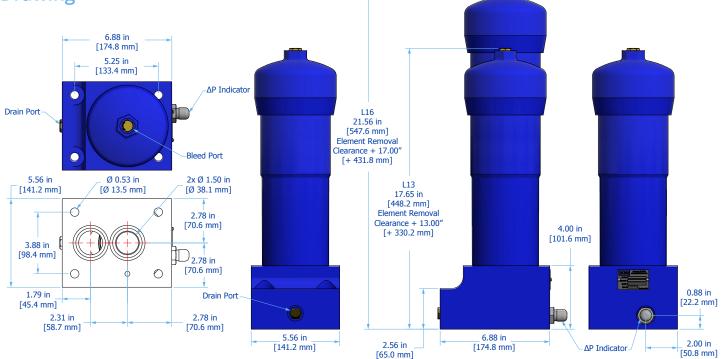

### The ideal choice for hydraulics.

Use the PFH62 as the main high pressure filter(s) in a hydraulic system or upstream of sensitive components as a pilot filter to protect your valves and actuators. The PFH series is engineered to provide lower operating ISO Codes than what is required for compliance with hydraulic component manufacturers' warranties.

# PFH62 Sizing Guidelines

#### Filter Assembly Sizing Guidelines

Effective filter sizing requires consideration of flow rate, viscosity (operating and cold start), fluid type and degree of filtration. When properly sized, bypass during cold start can be avoided/minimized and optimum element efficiency and life achieved. The filter assembly differential pressure values provided for sizing differ for each media code, and assume 32 cSt (150 SUS) viscosity and 0.86 fluid specific gravity. Use the following steps to calculate clean element assembly pressure drop.

### Sizing recommendations to optimize performance and permit future flexibility

- To avoid or minimize bypass during cold start the actual assembly clean  $\Delta P$  calculation should be repeated for start-up conditions if cold starts are frequent.
- Actual assembly clean  $\Delta P$  should not exceed 10% of bypass  $\Delta P$  gauge/indicator set point at normal operating viscosity.
- If suitable assembly size is approaching the upper limit of the recommended flow rate at the desired degree of filtration consider increasing the assembly to the next larger size if a finer degree of filtration might be preferred in the future. This practice allows the future flexibility to enhance fluid cleanliness without compromising clean  $\Delta P$  or filter element life.
- Once a suitable filter assembly size is determined consider increasing the assembly to the next larger size to optimize filter element life and avoid bypass during cold start.
- When using water glycol or other specified synthetics, we recommend increasing the filter assembly by 1~2 sizes.

#### Step 1: Calculate $\Delta P$ coefficient for actual viscosity

#### Using Saybolt Universal Seconds (SUS)

ΔP Coefficient	=	Actual Operating Viscosity1 (SUS)	×	Actual Specific Gravity
		150	~ —	0.86

Using Centistokes (cSt)							
ΔP Coefficient	Actual Operating Viscosity <sup>1</sup> (cSt)	Actual Specific Gravity					
	32	0.86					

### Step 2: Calculate actual clean filter assembly $\Delta P$ at both operating and cold start viscosity

Actual Assembly = Clean ∆P	Flow Rate	Х	∆P Coefficient (from Step 1)	Х	Assembly ∆P Factor (from sizing table)
----------------------------------	--------------	---	---------------------------------	---	---

# PFH62 Sizing Guide

Filter Sizing<sup>1</sup>

Filter assembly clean element  $\Delta P$  after actual viscosity correction should not exceed 10% of filter assembly bypass setting. See page 4 for filter assembly sizing guidelines & examples. For applications with extreme cold start condition contact Hy-Pro for sizing recommendations.

## PFH62 Specifications

Dimensions	See Installation Drawings on page 3 for model specific dimensions.							
Weight	<b>PFH62 L8</b> 33 lbs(15 kg)	<b>PFH62 L13</b> 42 lbs(19 kg)		<b>FH62 L16</b> 3 lbs(21.8 kg)				
Operating Temperature	-20°F to 250°F (-29°C to 121°C)							
Operating Pressure	6,600 psi (455 bar) max							
Burst Pressure	19,900 psi (1,372 bar) max							
Flow Fatigue Rating	2000 cycles at 0-300 bar per NFPA T3.10.5.1, R2 2000							
ΔP Indicator Trigger	73 psid (5 bard)							
Element Collapse Rating	<b>HP60</b> 290 psid (20 bard) max	<b>HP61</b> 3000 psid (206.8 bar		<b>HP964</b> 150 psid (20 bard) max				
Integral Bypass Setting	90 psid (6.2 bard)							
Materials of Construction	<b>Head + Cover</b> Ductile iron	<b>Bowl</b> Seamless steel tubir		erior Coating der coated				
Media Description	<b>M</b> G8 Dualglass, our latest generation of DFE rated, high performance glass media for all hydraulic & lubrication fluids. $\beta x_{[C]} \ge 4000$	<b>A</b> G8 Dualglass high performance media combined with water removal scrim. $\beta x_{[C]} \ge 4000$	<b>SF</b> Dynafuzz stainless steel fiber media $\beta x_{CI} \ge 4000$	<b>W</b> Stainless steel wire mesh media $\beta x_{CI} \ge 2$

### Filtration starts with the filter.

Lower ISO Codes: Lower Total Cost of Ownership Hy-Pro filter elements deliver lower operating ISO Codes so you know your fluids are always clean, meaning lower total cost of ownership and reducing element consumption, downtime, repairs, and efficiency losses.

**DFE Rated Filter Elements** DFE is Hy-Pro's proprietary testing process which extends ISO 16889 Multi Pass testing to include real world, dynamic conditions and ensures that our filter elements excel in your most demanding hydraulic and lube applications.

**Upgrade Your Filtration** Keeping fluids clean results in big reliability gains and upgrading to Hy-Pro filter elements is the first step to clean oil and improved efficiency.

Advanced Media Options DFE glass media maintaining efficiency to  $\beta 1_{cc} > 4000$ , Dualglass + water removal media to remove free and emulsified water, stainless wire mesh for coarse filtration applications, and Dynafuzz stainless fiber media for EHC and aerospace applications.

**Delivery in days, not weeks** From a massive inventory of ready-toship filter elements to flexible manufacturing processes, Hy-Pro is equipped for incredibly fast response time to ensure you get your filter elements and protect your uptime.

**More than just filtration** Purchasing Hy-Pro filter elements means you not only get the best filters, you also get the unrivaled support, training, knowledge and expertise of the Hy-Pro team working shoulder-to-shoulder with you to eliminate fluid contamination.
